

Suitcase Amps

Back to the past!

Suitcase Amps are tube amplifiers made on suitcases from the 20's and 40's, that faithfully reproduce, in sound and appearance, the amplifiers that early bluesman hand built using pieces of shortwaves radio.

Back to the Past

The philosophy behind Got My Mojo Working is the “Research for the lost sound”, a research for sounds based on handicraft design and production that many modern companies have abandoned to follow a mass market production.

At Got My Mojo Working we’ve decided to start from scratch, starting with the basic circuitry that companies like RCA or General Electrics supplied together with valves, thus recreating elementary electric circuits of vintage instruments and preserving their typical sonorities.

The strong link with the tradition can be found in the Suitcase series: tube amplifiers made on suitcases from the 20’s and 40’s, that faithfully reproduce, in sound and appearance, the amplifiers that early bluesman hand built using pieces of shortwaves radio.

Suitcase 3

Specifications:

3 Watt Output,
one channel.

Power tube: 1x Tesla EL90
Pre tube: 1x 12AT7EH
Solid state rectifier

Controls:

Input,
Volume.

Suitcase is available with
1x8" Jensen or Celestion speaker.

Suitcase 10

Specifications:

10 Watt Output,
one channel.

Power tube: 1x 5881
Pre tube: 1x ECC803
Rect Tube EZ81

Controls:

Input,
Volume, Tone.

Suitcase 10 is available with
1x12" Jensen speaker.
